MP-228 - PRACTICE HAND GRENADE FUZE

DESCRIPTION

The MP-228 Practice Hand Grenade Fuze is the standard US Military type training fuze, used for training in the use of various types of hand thrown grenades. Operation is by removing the safety clip, pulling the safety pin and the release of the safety lever when thrown. This fires a percussion primer that ignites the delay column of 4 to 5 seconds. The training report is fired at the end of the delay column, outputting a 120db loud sound and a small puff of white smoke.

The MP-228 is threaded for the M69 Training Grenade Body as standard. Custom thread patterns, bends and safety/confidence clips can also be provided to meet your requirements.
